EdgeX Certification Working Group

Meeting Minutes for February 25, 2019

Start 7:00am PST

Attendees:

- Andy Foster (IOTech)
- Jim White (Dell)
- Randy Thompson (Dell)
- Paul Phillips (Dell)
- Mirko Teodorovic (Mainflux)
- Tobi Mosby (Intel)*

* First time attendee

Old Business

Reviewed meeting minutes from Feb 18

New business

Walked through the Project Specification doc that has been created in Google docs. Reviewed the outline and purpose of sections.

Tobi has experience with certification in other organizations. Pointed out the need for a "well defined specification" to set expectations and requirements.

- APIs. E.g., what are minimums?
- Performance. E.g., message rate?
- Categories of services and how they may be evaluated differently

Do we test components stand alone or as part of complete system?

Testing may be limited or happen at rate the test tools can be made available. Andy pointed out that core services have lots of test tools. Device services are being worked on now.

Actions:

- Everyone to review the doc and add their comments.
- Andy will start working on identifying existing test tools that may be available for use.

Adjourned 7:40am PST

Next meeting will be Mar 4 at 7:00am PST.

Respectfully submitted,

Randy Thompson
