TC	Trevor Conn (Me)	 
T	tonyespy	 
	Akram Ahmad (Dell)	 
AS	André Srinivasan Redis Labs	 
AB	Anthony Bonafide	 
	Brandon Forster	 
JB	Jason Bonafide	 
JW	Jim Wang	 
JW	Jim White	 
LG	Lenny Goodell (Intel)	 
	Tingyu zeng	 

- Comment from PR #2446
 - https://github.com/edgexfoundry/edgex-go/pull/2446#discussion_r396694450
 - *Resolved, see* https://github.com/edgexfoundry/edgex-go/pull/2446#discussion_r398648068
- Review List of environment variable overrides planned for compose files (Lenny)
 - Follow-on request for documentation to centralize config-related info
 - Could follow template found here:
 - https://github.com/edgexfoundry/edgex-docs/blob/b119fcd9b495b6d9b32210c7eb6cdc8fc089608/docs_src/microservices/support/logging/Ch-Logging.md
 - *See meeting recording for list of overrides, common and service specific*
- Config-seed removal follow-up (see 5-Mar meeting notes)
 - Approve ADR (DONE)
 - Integrate ADR-related mods into go-mod-bootstrap
 - <https://github.com/edgexfoundry/go-mod-bootstrap/pull/59>

- Integrate go-mod-bootstrap into all services
 - Code changes required. Lenny has example (*draft PR*)
 - Edit dockerfiles to remove `–profile` cmd line
 - Remove `res/docker` directories
 - Remove `config-seed` service from `edgex-go`
- Update docker-compose files (*draft PR dev-scripts #235*)
 - Include env var overrides previously set in dockerfile
 - Remove `config-seed` entry
 - SNAP: Remove `config-seed` entry
- *Documentation (see edgex-docs) w/r/t new general Configuration section*
 - <https://github.com/edgexfoundry/edgex-docs/issues/116>
- *Ask from Tony: Estimated time to completion?*
 - *PR and merge workflow in several repos*
 - *Lenny estimates completion by next Core WG, could be week following*
 - *Tony to create draft PR for Snap*
- Readings should support “Array” data type
 - ADR: https://github.com/edgexfoundry/edgex-docs/blob/master/docs_src/design/adr/device-service/0002-Array-Datatypes.md
 - Datatype enum defined here:
 - <https://github.com/edgexfoundry/device-sdk-go/blob/0749bf2bbbf424e6ee3aee44608466ddf380fa6/pkg/models/command/value.go#L24>
 - Duplicated in `go-mod-core-contracts` here:
 - <https://github.com/edgexfoundry/go-mod-core-contracts/blob/2ecd085bbca6ad6bda9224ce78a5545e05826953/models/readin.go#L22>
 - Enum is used in simple validation for requests. Recommend consolidation of these enums into one. `go-mod-core-contracts` is probably the right location. If agreed, would need buy-in from Device Service team.
 - *Agreed, file an issue to remove the enum from device-sdk-go*
 - *Extension of data types to include array will be done in go-mod-core-contracts.*
 - *Sequence → go-mod-core-contracts then device-sdk-go*
- To-dos for secure Redis deployment
 - <https://github.com/edgexfoundry/edgex-go/issues/2449>
 - *Completed in local environment, still testing. Shooting for PR early next week.*
 - [Edgex-go and developer scripts repos](#)
