Device and Device SDK Working Group

Notes for January 24 2022

RFID / LLRP

- Some snap-related rework required before release

LoRa

- Colin Peters of Fujitsu presented a usecase for EdgeX connecting to LoRa devices
- Have written a Golang device service for this
- DS is specific to a particular LoRa-connected device
- Suggest that this could be contributed to edgex-examples
- Jim to advise Fujistsu on next steps

Object-typed Events

- Daryl has a requirement which is possibly satisfied by sending Object events via the async channel, however the documentation is not clear
- Jim and Daryl to discuss via email and raise an issue against the docs
