Device and Device SDK Working Group

Notes for November 25 2019

Status updates

- Go SDK 1.1.1
  - #261 and #354: fixes landed in master; need new PRs for Fuji branch.
  - #342 : **Tony** to review PR #383.
- Services currently in -holding
  - **Tony** to review device-rest-go using PR#5. **Iain** to look at creating a PR template for service reviews.
  - device-bluetooth-c : 5 issues remain with PRs for 2. Will ping the developers w.r.t. the AppArmor issues.
  - device-opcua-c : 2 remaining issues.
  - device-gps : need to check the status of this service.

Attributions

- Noted that as there is no artefact generated for the Go SDK it does not require an Attribution.txt file, however, device service authors will need to include one.
- Agreed that we should provide an example Attribution.txt file with the example device service that is included in the SDK repository. This should be checked using the automated methods used in other services. **Iain** to update the relevant issue.

Admin

- New timeslot for next (2nd Dec) and subsequent meetings: 1 hour earlier (switch with Certification WG)
- Next meeting to include discussion of dynamic discovery
