EdgeX 3.0 Planning

Deprecated items list Note: these will actually be removed in 3.0

- References to ZeroMQ (allowing for the refactor of go-mod messaging see next slide)
- Remove SMA and executor
- Username/password for SMTP
- App Services old AES encryption
- Legacy Snap options
- Old tagging in edgex-Ul
- LastConnected and lastReported in Device Services
- Kong Oauth2 plugin (keeping JWT)
- Deprecated aspects of App Functions SDK:
 - MessageProcessor interface
 - SetFunctionsPipeline and LoadConfigurablePipeline
 - NewTags factory method in app functions

EdgeX 3.0 Planning

Focused on non-backward compatible changes:

New Features

Yes:

Needs more discussion:

Global configuration

No

- Internationalization of metadata
- Time Series DB in place of Redis

Technical Debt

Yes:

- refactor go-mod messaging to support single host messaging (relating to removal of ZeroMQ)
- Move protocol properties to JSON typing

Needs more discussion:

Lowering JSON overhead (gzip an option)

No

- Move command service and API into core metadata
- Move some config options to static vars in code
- Force units on a device resource to be mandatory

Still to process: backward compatible changes... see https://docs.google.com/document/d/1-77RGAo76K3OBxmaJK96KfWsM2c3MNU2dyi7tCJQkKU/edit
