

# Snappy Working Group Notes

2018-08-08

Attendees: Ian Johnsom, Jeremy Phelps, Tony Espy

## Topics

### Pending Snap PRs

- security-secret-store
  - miscellaneous changes required to run security services in the snap:
  - <https://github.com/edgexfoundry/security-secret-store/pull/15>
    - **ACTION**[Tony] - review
- edgex-go
  - adds new scripts/services:
    - cassandra - replaces postgresSql which isn't well-supported in a snap; used by kong
    - kong
    - vault
    - start script (used by the snap's start-edgex script)
    - security-config-seed (my name for go binary which does initial provisioning of kong/vault)
    - <https://github.com/edgexfoundry/edgex-go/pull/464>
      - **ACTION**[Tony] - review

### Java Services Build Breakages

- The california branch of most of the Java services were broken again, as core-test-0.6.0-SNAPSHOT.jar had been deleted by the cleanup jobs, which were set to delete snapshots after 30days. This cleanup

### 0.6.1 -- What is it?

- There was some confusion as to what 0.6.1 actually includes
- Tony: I thought it was meant to replace the remaining Java support\* services with Go-based services
- There was some discussion if this was really true or not
- It was pointed out that a release mgr would help in a situation like this!
- 
- **ACTION**[all] - bring up at next Core WG meeting

## Support

- Discussion about whether we'll even do a 0.6.2 release?
- How long are releases supported for?
- Should we adopt a cadence for dot releases (i.e. monthly)?
- Will the project release independent dot releases of services (not possible with the snap)?
  - side discussion about independent versioning of Go components in monorepo
  - vgo expected as experimental feature in 1.11 (sep), stable in 1.12 (feb19)
  - we should probably start experimenting with vgo for dehli, and use for edinburgh
- ACTION[Tony] - raise at the next DevOps & TSC meetings

## Blackbox Testing

- ACTION[Tony] - ping Andy

## Weekly Meeting

- this is our last snappy wg meeting, all snap issues will now be addressed in the DevOps meeting
- ACTION[Tony] - ask Brett to cancel

## edgex-go

- Ian created a **snap** tag for edgex-go issues
