EdgeX-Open Horizons Project Meeting: 7/29/19

Attendees: Jim (Dell), Joe, Glenn (IBM), Rodney (Beechwoods). Attendees that may have joined after the start of the meeting may not have been captured and listed.

Discussion and action items as a result of meeting in RED

Old Business

- Joe provided background on where we are at with the project for Glenn (Glenn new to project with IBM).
- Jim, Joe, and Glenn discussed Jim's attempt to recreate OpenHorizon's EdgeX POC per Dave Martin's work @ IBM documented here: https://github.com/dcmartin/open-horizon/tree/master/edgex.
    - Initial script had used public/private keys in wrong order at Part II, step 4.
    - This was fixed but now getting 401 error at step 4 which is due to trying to access IBM's Open Horizon's exchange server. We'll need our own instance.
    - Glenn is going to provide instructions on how to set that up
    - Glenn also looking into how to download install Open Horizon's. Jim had to build it (which worked) but download of binary did not install (likely due to key issue according to Glen).
- After getting the POC working, the EdgeX system management team can look at what problems does Open Horizon's solve, what more can be done, what works/doesn't and make recommendations to TSC and Open Horizon project on next steps.
