

Core Working Group Agenda (11-Jul-2019)

Attendees:

Old Business

- New business first. Cover the item below if time permits
- Replacement for “init mongo” script
 - <https://github.com/edgexfoundry-holding/edgex-mongo-init/pull/1>
 - Where should this functionality ultimately live?
 - How does it fit in the larger context of provisioning an EdgeX deployment?
 - Suggestion from previous Core WG meeting
 - *Idea to add this responsibility to config-seed*
 - *Add logic to edgex-go (abstractions for DB initialization and implementation for credential bootstrapping)*

New Business

- Tee up discussion related to configuration modification per SMA working group
 - Flows from original SMA meetings can be found here (June 11th)
 - <https://wiki.edgexfoundry.org/display/FA/Systems+Management+Working+Group>
 - Mods through centralized locale only (registry)
 - Mods through the service, then to the registry
 - Triggers propagation to other instances of same service
- ZeroMQ errors in Edinburgh
 - Lenny @ Intel working on this
 - See thread on edgex-go issue
 - <https://github.com/edgexfoundry/edgex-go/issues/1512>
