

## Core Working Group Agenda (12-Dec-2019)

Attendees:

### Old Business

- Go-mod-bootstrap progress
  - Repo created in edgexfoundry org and populated
  - Initial integration work underway, possible review of initial PR
- Update on OpenAPI 3.0 (Swagger) docs for Geneva
  - <https://github.com/tsconn23/edgex-geneva-api>
  - The following version of core-metadata contains ALL of the current thinking
    - [https://github.com/tsconn23/edgex-geneva-api/blob/bulk\\_patch\\_207/core-metadata.yaml](https://github.com/tsconn23/edgex-geneva-api/blob/bulk_patch_207/core-metadata.yaml)
  - Trevor target-ing ADR-like document to review key principles of refactoring for this meeting.

### New Business

- Removal of export services
  - Review of outstanding PRs for completion
  - Core-contracts
    - <https://github.com/edgexfoundry/go-mod-core-contracts/pull/186>
  - Edgex-go
    - <https://github.com/edgexfoundry/edgex-go/pull/2219>
  - Docs
    - No PR yet
    - Delete the following
      - <https://github.com/edgexfoundry/edgex-docs/tree/master/export>
    - Review other content for internal links to the above
  - Tests
    - <https://github.com/edgexfoundry/blackbox-testing/pull/346>
  - Docker-edgex-mongo
    - No PR yet
    - Need to remove credential bootstrap
  - Developer scripts
    - <https://github.com/edgexfoundry/developer-scripts/pull/186>
  - Edgex-ui-go?
    - Anything to be done here?

- Last week question was asked w/r/t re-purposing core-data as “support-data”. Follow up on that?
  - *MEstrin – Can we discuss elimination of core-data? Use case is a REST Device Service, providing mechanism for injecting data into the system via REST API. Isn't this the same thing as core-data's capabilities?*
    - *REST Device Service still depends on core-data's API for ingestion (Lenny).*
    - *If persistence is optional, repurpose core-data as support-data perhaps.*
- Any new business?
