

Core Working Group Agenda (28-Mar-2019)

Attendees:

Old Business

- Intel -- Meeting scheduled w/Microsoft RE: Go plugins support for Windows
 - *It was rescheduled. Still pending.*
- Operating State Unmarshalling Follow-up
 - *Need a decision on this*
 - *We have two options currently. They are gross, but they are options.*
 - Remarshal in the controller method to get our current validation to fire
 - Add UnmarshalJSON methods to model types and put the knowledge of valid child type states into the parents.
 - E.g. ProvisionWatcher instance checks to see if the OperatingState is empty after unmarshalling.
 - *I'm leaning toward this b/c of encapsulation within go-mod-core-contracts.*
 - *FYI – OperatingState used within 5 parent structs (CommandResponse, Device, DeviceService, ProvisionWatcher, Service)*
- Documentation needs
 - GoDoc versus published docs
 - Malini suggested hosting GoDocs by different ports per release
 - This will work, but who will host it?
 - Some other options here
 - <https://jira.hyperledger.org/browse/FAB-5475?focusedCommentId=32542&page=com.atlassian.jira.plugin.system.issuetabpanels%3Acomment-tabpanel#comment-32542>

New Business

- Should Docs be split out of edgex-go?
 - 23 of 69 issues currently in edgex-go are docs related
 - Docs are for everything in EdgeX, not just core services
- Device Profile and Device Service simplification issues (Tony)
- Need guidance on if the issue below should be pulled into Edinburgh
