- Last week question was asked w/r/t re-purposing core-data as “support-data”. Follow up on that?
  - *MEstrin – Can we discuss elimination of core-data? Use case is a REST Device Service, providing mechanism for injecting data into the*

*system via REST API. Isn't this the same thing as core-data's capabilities?*

- *REST Device Service still depends on core-data's API for ingestion (Lenny).*
  - *If persistence is optional, repurpose core-data as support-data perhaps.*
- Any new business?
