

## **Core Working Group Agenda (14-Nov-2019)**

Attendees:

Michael Estrin (Dell)  
Trevor Conn (Dell)  
Ike Allison (Alicon)  
Joe Pearson (IBM)  
Brandon Forster (Dell)  
Jason Bonafide (Dell)

*\*\* Due to limited attendance we did not discuss the go-mod-registry design proposal. Deferring to next week. \*\**

### **Old Business**

- None

### **New Business**

- Design review *go-mod-registry* (Lenny @Intel)
  - The goal is to separate the responsibilities of configuration and service discovery.
  - Preliminary PR <https://github.com/edgexfoundry/edgex-go/pull/2133>
- Proposal discussion: Common service bootstrap / DI container provided via Go module (Michael @ Dell)
  - *Basic idea*
    - *All services in core utilize the bootstrap/di packages*
    - *Extract these packages into a module usable by other tiers of the EdgeX platform (device, app-functions)*
    - *App-functions already has a use case for this w/r/t mongo credential populating in security vs non-secure*
    - *Discussed possibility of putting a draft into a new module repo, possibly in holding. Michael to start on this (private repo) will have for next week.*
- Module versioning
  - Preliminary discussion w/r/t timing of modules being assigned major version
  - Should we be considering this for Geneva or Hanoi?
    - Right now Geneva could be v2.0 with Hanoi a hardening release for possible LTS.

- *Trevor shared thoughts accordingly (see above). No other perspectives on the call, will probably talk more as we get closer to Geneva release.*
- Any new business?
