Agenda

- TAF Status
 - Functional tests: 545 - 6 failure, due to [#717](#) Add yaml:inline to DeviceProfileBasicInfo for DeviceProfile dto
 - Integration tests: 43 - all passing
 - Performance tests: 10 - 1 failure, due to image increase.
- Big Ticket Items
 - Dynamic Device Profiles - Two PRs to review on edgex-go
 - Delayed Service Start (Security) - Core WG to own
 - Go Spiffe footprint concern - discussed in security WG call?
 - Lenny and Bryon believe we can conditionally build go spiffe into certain images. Propose to test this in virtual device and app service configurable initially. Then discuss details of roll out. Bryon to action.
 - TAF testing [#594](#) Agreed that automated testing for delayed service start is not essential for Kamakura release
 - Metrics - Lenny demo
 - North-South Message Bus ADR [#656](#). Ready to vote?
- Triage and Notable Tickets
 - Provide a TUI for custom generation of docker-compose files [#225](#)

Ticket Status

- Core WG [Project Board](#)
 - go-mod-core-contracts
 - Fixed issues
 - [#717](#) Add yaml:inline to DeviceProfileBasicInfo for DeviceProfile dto
 - go-mod-bootstrap
 - In progress issues
 - [#307](#) Create a new common Metrics Manager
 - Fixed issues
 - [#314](#) Issue overriding AppCustom settings with environment vars
 - edgex-go
 - New issues
 - [#3925](#) Implement new Device Profile API
 - [#3932](#) Use formatted alternative log function instead of fmt.printf
 - [#3935](#) I18n/I10n EdgeX metadata (and perhaps other areas such as events/readings)
 - [#3933](#) Implement ProfileChange configuration for core metadata
 - In progress issues
 - [#3901](#) Create new Core Data metric for Events received
 - Fixed issues
 - [#3918](#) docs(metadata): Add new APIs for device profile changes
 - [#3909](#) Log and ignore the validation error if the Device Service is not running when creating and updating Device
 - edgex-compose
 - New issues
 - [#225](#) Provide a TUI for custom generation of docker-compose files
 - edgex-docs
 - New issues
 - [#718](#) Incorrect environment variables for app-service-mqtt setup
 - Fixed issues
 - [#712](#) Add MaxEventSize to core-data Config Properties section
- QA/Test Issues [Project Board](#)
 - edgex-taf
 - Fixed issues
 - [#605](#) Change MQTT Broker address for related app-services
 - [#615](#) Update compare data of image and binary size to Jakarta
 - [#613](#) Update deviceprofile testcases for empty deviceresources
 - [#609](#) The jakarta branch is pulling the wrong images to test
