DevOps WG Update (Hanoi)

• **Pipeline Enhancements**
  - [#229](#229) [Complete] Enable Snap build in edgex-go pipeline, remove legacy JJB jobs
  - [#234](#234) [In Progress] edgex-cli build pipeline (Demo)
  - [#195](#195) [In Progress] Research auto-generation of documentation for edgex-global-pipelines
  - [#244](#244) [In Progress] GitHub Release automation
  - Misc pipeline library tech debt and bug fixes for git-semver.
Automate Developer Scripts

Automate developer-scripts tagging of artifacts during code freeze or release.

https://github.com/edgexfoundry/developer-scripts/tree/master/releases

• Under the purview of the Release Czar. Manual for Hanoi can be automated in the future. Release Czar will create issue at before code freeze. Anyone can pick up the issue and do the work. Implementation does not have to fall solely on the Release Czar.

• 3 Step Process to update .env file

  1. At code freeze, pin all non EdgeX artifact versions to patch version. For example: KONG_VERSION=2.1 \(\rightarrow\) KONG_VERSION=2.1.3
  2. At release time, EdgeX artifacts in env file are pinned to patch versions. For example: APP_SERVICE_VERSION=master \(\rightarrow\) APP_SERVICE_VERSION=1.2.3 and release directory is created.
  3. Post release, revert nightly artifact versions to minor release version. For example: KONG_VERSION=2.1.3 \(\rightarrow\) KONG_VERSION=2.1

Kick off blackbox-testing job when developers open PR’s in developer-scripts.

Modify blackbox-testing/sync.sh script to read a parameter of where to pull the compose file?
Notes

• Diana and Ernesto to sync up on edgex-cli build process.
