

Device and Device SDK Working Group

Notes for February 10 2020

Status updates

- SDKs: new Fuji releases
 - C 1.1.1 ready, Go 1.1.2 requires a release-note addition
- C: v2 API
 - Headers and documentation added, implementation to follow
- Go: Dynamic discovery
 - Provision Watcher management implemented
- Visual Inference
 - Request made to create repository in -holding

Metrics collection

- Suggestions for new metrics
 - Device count, Request counts, Request failure / success, Latency
 - The unit of counting to be Events (rather than Readings) at least initially
 - Counting AutoEvents and external requests separately will better illustrate the service's static versus dynamic load
