

# Device and Device SDK Working Group

## Notes for June 29 2020

### Interface selection

- The interface on which the services should listen needs to be configurable. Functionality for this is in go-mod-bootstrap.
  - Go SDK and services need to consume the right version of go-mod-bootstrap
  - C SDK and services will need their own implementation

### Client monitoring

- Issues to be created to remove this from the various services

### Go SDK refactor

- Global variables removal – PR expected in the next few days
