

Device and Device SDK Working Group

Notes for July 20 2020

Interface selection

- ServerBindAddr config option now available in Go SDK (v1.2.3)
 - Issues for device services are unblocked
- C SDK to be updated

Client monitoring

- Issues in backlog for configuration cleanups

Go SDK refactor

- Global variables removal – PR is marked as draft; will be converted to open

Remote Logging

- To be re-instated in C SDK

Remaining requirements documentation (legacy)

- **Iain** to liase with **Jim** to get this moving

Async channel performance

- Go SDK #552
- Multithreading can increase throughput to core-data
- But may cause loss of ordering
- Put on hold for now
