

Device and Device SDK Working Group

Notes for May 23 2022

Jakarta patch release

- 2.1.1 LTS release planned for June 8th
- PR exists for the MessageBus config leak, but there is a better fix which will be implemented instead

Kamakura release

- C SDK remaining issues:
 - Secure Consul via Vault Token
 - Token refresh on expiry
 - StatusCode population in Event
- Device Services to be released:
 - CoAP, Grove, BACnet (require CSDK)
 - New Camera services (USB, ONVIF)
 - Jim to check legals on ffmpeg inclusion
- Examples to be updated to Kamakura

Levski release

- Metrics – Iain to set up a wiki page listing the initial set of metrics to generate
- CPE if implementation becomes available in time
- device-sdk-cpp (Eaton to develop)
- Testing - What testing can we do using real hardware?
- Discovery – What would we like to change about the way discovery works?

Next meeting

- June 6th (no meeting next week: Memorial Day)
