

Device and Device SDK Working Group

Notes for January 31 2022

New DS: UART

- Updated this week. Some changes re: versions required

v2 update: GPIO

- Also progress on this
- Targeting a 2.1 release
- This adds to the LTS – the release information page should be updated

Issues

- Doc issue #598 (missing DS documentation) is still valid and needs to be addressed
- Doc issue #468 (migration guide) is covered – and done – elsewhere and should be closed
- Tooling for migration of configs to v2 (#667) may not happen, nobody is working on this
