

# Device and Device SDK Working Group

## Notes for August 9 2021

### Secure mode for C

- SecretStore functionality merged
  - No benefit to releasing a new version until secure Consul, MessageQueue are supported
- Issue with v2.0 when using MQTT as MessageQueue (#361)
- Workaround available – should make a new release if this cannot be verified

### device-grove-c

- Mengyi (Canonical) evaluating proposed updates
- Will also be updating snap support

### Discovery (Go SDK)

- Could potentially have both long-running and triggered discovery
- Should triggered runs be serialized?
- Real problem is lack of clarity in the documentation
  - Will create an issue to collect areas for improvement
