Note that this scenario is for when Configuration is by Registry Service Provider *(and *not* by local file system)

* For that scenario (i.e. when local file system is used), the SMA simply relies on the `ready-made` GC client that gets created (and initialized, hence ready-for-use) on start of `EdgeX` services SMA Sets Configuration (Writable) Without Restart

(2019-June-25) 2019

Note that if a service is found to be *not* registered, the Registry responds with a Registry-specific error message.

Client (e.g. Pulse IoT)

SMA

Registry-based General Client (aka "GC")

Service

Registry (e.g. Consul)

Description

A sequence diagram is a type of interaction diagram because it describes how-and in what order-a group of objects works together. This sequence diagram shows the process of scheduling an event.

To customize this template, click on any shape and type the information you would like to include. Rearrange and add shapes used as needed. **OR** automatically create your sequence diagram by using the markup feature.
