

System Management Working Group – January 31, 2020

Attendees

Michael Estrin (Me)

Akram Ahmad (Dell)

Jim White

Joe Pearson

Lenny Goodell (Intel)

Trevor Conn

Old Business

1. System Management Service
 - a. Kanban Review (<https://github.com/orgs/edgexfoundry/projects/29>)
2. CLI
 - a. Request for a TSC vote to adopt edgex-cli was sent this morning.
 - b. **Not in favor of doing an end-around vote; it's working group business and chair has the responsibility for managing that data. Don't want to set precedent for overriding a chair's decision. (Trevor)**
 - c. **Request to pull my request for a vote. Let's find a solution and a date by which a decision could be made. (Jim)**
 - d. **I will pull my vote request. Not able to give a specific date by which a review will be completed; it'll be dependent on completion of higher priority APIv2 work. (Michael)**
 - e. **Michael is working in two roles – System Management and Core. APIv2 timelines are flexible. Believes APIv2 is highest priority. (Trevor)**
 - f. **APIv2 is goal, not deadline. (Jim)**
 - g. **Request from Michael for volunteer to evaluate (and not delegate evaluation) of CLI to ensure dependencies have acceptable licensing terms, etc.**
 - h. **Jim offered to find someone outside of VMware to review and provide a summary of findings to Michael for him to report back to the community in a future working group meeting (and provide a subsequent recommendation to the TSC for adoption).**
3. EdgeX-specific system-wide metrics follow-up (Jim White, IOTech)
 - a. **Jim has started an ADR. Still need to get to device services.**

New Business

1. Open Horizon Integration subgroup kickoff meeting is on Monday.
2. Other new business?
