## Service naming

we have inconsistency in the names we are using for service keys that should be fixed for Ireland

edgex-go service's have the edgex- prefix App service configurable has just the app- prefix Devices services have a mix of prefix and postfix.

This naming inconsistency has become an issue in secure mode now that we are using the service key for the Consul ACL and SecretStore.

Propose we drop the edgex- prefix and postfix like -go, so the names are like this:

core-data core-metadata support-scheduler security-secretstore-setup app-rules-engine device-mqtt device-rest device-virtual

edgexfoundry.org | 😏 @edgexfoundry

## Go 1.16 migration

edgex-go and modules have been moved to Go 1.16

Snapcraft update to be done

DS and AS SDKs and services to be done (or may be done)

Developers to move at their leisure

Note to all about Go builds and use of go mod tidy

Builds no longer automatically pull in the dependency libs you need!!

## ADR review (in order of priority)
