

## Summary / highlights from the TSC Meeting 12-15-21

- Secret store tokens for delayed start services ADR has been approved and implementation can begin.
- eKuiper 1.4.1 is set to be released on Dec 29.
- CLI getting started guide is being worked.
- **OPC/UA update PR has been approved.**
- The device functions ADR (0021) is ready for review.
- Melvin Sun will present the EdgeX Challenge China (winners, numbers, etc.) in early January.
- Topcoder Challenge has resulted in a pretty nice tool for inspecting messages on the Redis Pub/Sub or MQTT bus. A holding repository has been created for the winning project.
- ADR status:
  - ADR #605 (device profile changes) target EOY – to be reviewed now with vote in early January
  - ADR #268 (metrics) target EOY – to be reviewed now with further discussion in early January
  - ADR #368 (UoM) target early 2022 – to be reviewed in January
  - ADR #644 (device functions) target EOY) – in early draft
  - A number of other ADRs have yet to be started but are planned for this release cycle (see the meeting slide deck)
- Eaton combined app/device service requirements are available for review here: <https://docs.google.com/document/d/1TXFg5tkbDIFa2tj0yfTZcQ4NPNfo-Y8c/edit>
- **All work group and TSC meetings for the week of Dec 22-31 are cancelled (in observation of Christmas / New Year holidays).**
- Monthly Architect's meeting on Monday covered the following topics:
  - Use the decision board for all design and ADR decisions going forward
    - <https://github.com/orgs/edgexfoundry/projects/45>
  - Deferred some of Issue #3777 (when to merge) to DevOps
    - replace the enforced branch update on the user-side (and git history) with the same operation done as part of the current CI tests
  - Dynamic Profile ADR - final comments by this week with vote in first week of Jan
  - Metrics ADR - collecting comments now through early Jan - we'll review once more in early Jan
