

EdgeX Planning Conference Napa Release Virtual Meeting

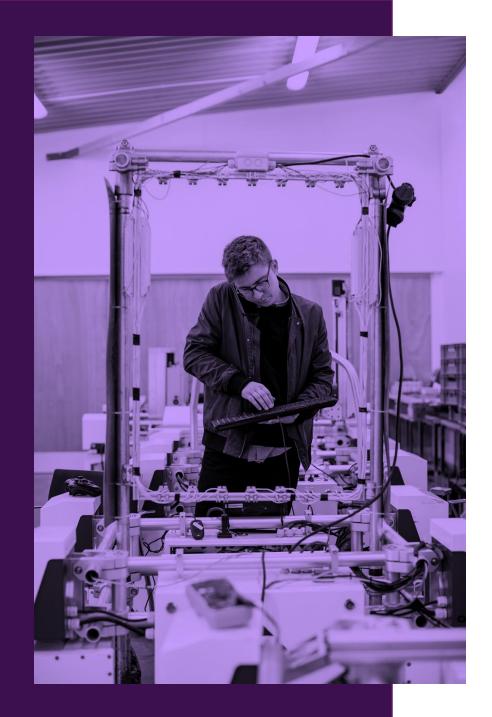

June 5th – 8th 2023

Conference Agenda

- June 5, Monday, 7am Kick Off and Main Architecture Discussions
 - Introductions and Meeting Logistics
 - Conclude any Minnesota Issues
 - Napa Aims and Objectives
 - Project Administration: TSC membership and Release Cadence Review
 - Napa Architecture Discussions
- June 6, Tuesday, 9am Architecture Discussions and Napa Scoping
 - Napa Architecture Discussions Cont
 - Winners EdgeX Awards 2023 (10am)
 - Napa Scoping by Working Group
- June 7, Wednesday, 7am Complete Napa Scoping, Business and Marketing Topics, Lessons Learnt
 - Napa Scoping by Working Group Cont
 - Business and Marketing Topics
 - Project Process Improvements
 - Lessons Learnt, Continuous Evaluation, etc
- June 8, Thursday, 9am Any Remaining Items
 - TBC

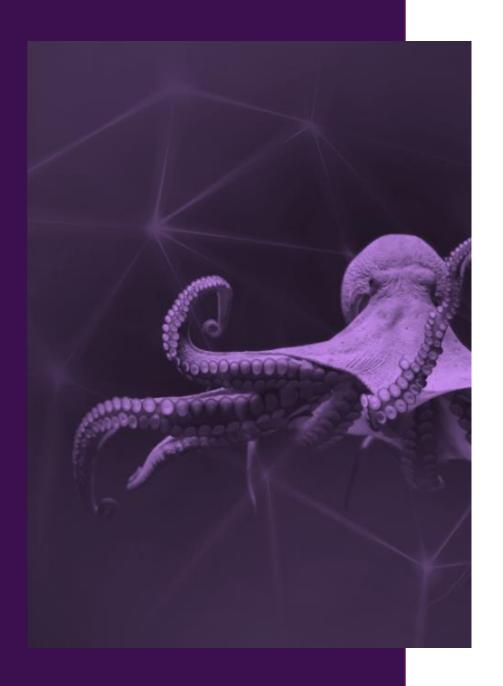

All times in PT

Intros

Name, rank, serial number please

Day 1

Conference Agenda – Day 1

- 7:00am Introductions
- 7:15am Minnesota release (any unfinished business, issues, etc)
- 7:30am Napa Aims and Objectives release high level agreement
- 7:45am Project Administration: TSC membership and Release Cadence Review
- 8:00am Napa Architecture Discussions
- 10:00am Day 1 adjourn

All times in

PT

Minnesota Wrap-Up

Remaining Minnesota Release Items

- Still be done
 - Release of all Device Services? Which are still TODO?
 - Examples
 - Doc completion?
 - See some v2 references: <u>https://docs.edgexfoundry.org/3.0/getting-started/quick-start/</u>
 - Performance metrics report
 - Others?
- Collateral / Marketing:
 - https://www.edgexfoundry.org/software/releases/
 - LF Blog: Link coming
 - Embedded Computing article
- Issues/Concerns
 - None yet?
- Reminder we are still supporting EdgeX 2.1 (Jakarta) LTS until Nov 2023

Starting Napa

Napa

Napa Release Objectives/Size – As discussed in Prewire

• Minor Version - move to 3.1?

- Expectation so far has been a stabilization release of the 3.0
- Expecting to be the next LTS? Our previous LTS was a stabilized V2 (at version 2.1)
- LTS Policy: https://wiki.edgexfoundry.org/pages/viewpage.action?pageId=69173332
 - Per LTS Policy, Jakarta will be supported period of 2 years (to November 2023) unless otherwise stipulated by the TSC
 - A November 2023 release (likely a 3.1) would be a candidate for LTS and continue that trend...

• Current major additions under consideration – all changes must consider V3 compatibility

- URIs for Files
- Common Config Completion
- Data Modelling and Relationships
- Zero Trust / Secure Distributed EdgeX (ADR)
- Bring Your Own Vault (ADR)
- Documentation Enhancements
- Core Data Retention

Project Administration

- EdgeX TSC Membership Next Term
- EdgeX Release Cadence and Naming

EdgeX TSC 2023-2024

- Current roles end 23rd June
- Disclaimer: all of the below are suggestions/ideas at this point
 - All roles are voted in under the meritocracy of EdgeX
 - A mixture of leadership continuity and new people is encouraged for the long-term future of the project
 - Would like to maintain 10 voting TSC members next time around
 - Working Group Positions nominations so far:
 - App WG Lenny Goodell. Elizabeth Lee co-chair (both Intel)
 - Core WG Cloud Tsai. Melody Liu co-chair (both IOTech)
 - Now includes Security
 - Devices WG Lindsey Cheng. Felix Ting co-chair (both IOTech)
 - DevOps WG Ernesto (Intel)
 - (Non-Voting) Outreach open

- At-Large Roles nominations so far
 - Farshid Tavakolizadeh (Canonical)
 - Tom Brennan(Eaton)
 - James Butcher (IOTech)
 - Melvin Sun (Intel)
 - Elizabeth Lee (Intel)
 - y <mark>open</mark>
- EdgeX roles nominations so far
 - TSC Chair James
 - Product Manager Lenny
 - Release Czar Bill Mahoney(Intel)

EdgeX Awards

- Congratulations to all nominees
 - Contribution Award
 - Lenny Goodell (Intel)
 - Cherry Wang (IOTech)
 - Bruce Huang (IOTech)
 - Melvin Sun (Intel)
 - Laura Alvarez (IOTech)
 - Cloud Tsai (IOTech)
 - Bill Mahoney (Intel)
 - TAF Team (IOTech Taiwan)
- TSC voting closed
- Two winners in each category to be announced by Kendall Waters Perez (LF Edge) tomorrow

- Innovation Award
 - Lenny Goodell and Elizabeth Lee (both Intel)
 - Vijay Annamalaisamy (HCL)
 - Ernesto Ojeda (Intel)
 - Bryon Nevis (Intel) **ineligible this year

EdgeX Cadence Check

- April/May & Oct/Nov to remain target release months?
 - Minnesota release (Brett) May 2023
 - Napa release (Ernesto) Nov 2023
 - Odessa release (Mengyi & Farshid) April 2024
 - Palau release (Rodney) Nov 2024
 - Q release April 2025
- Next Planning Meeting (likely Nov 2023)
 - With travel restrictions lifted is a F2F possible?
 - Volunteers or suggestions on where to hold this meeting?
 - Consider a target conference or event?

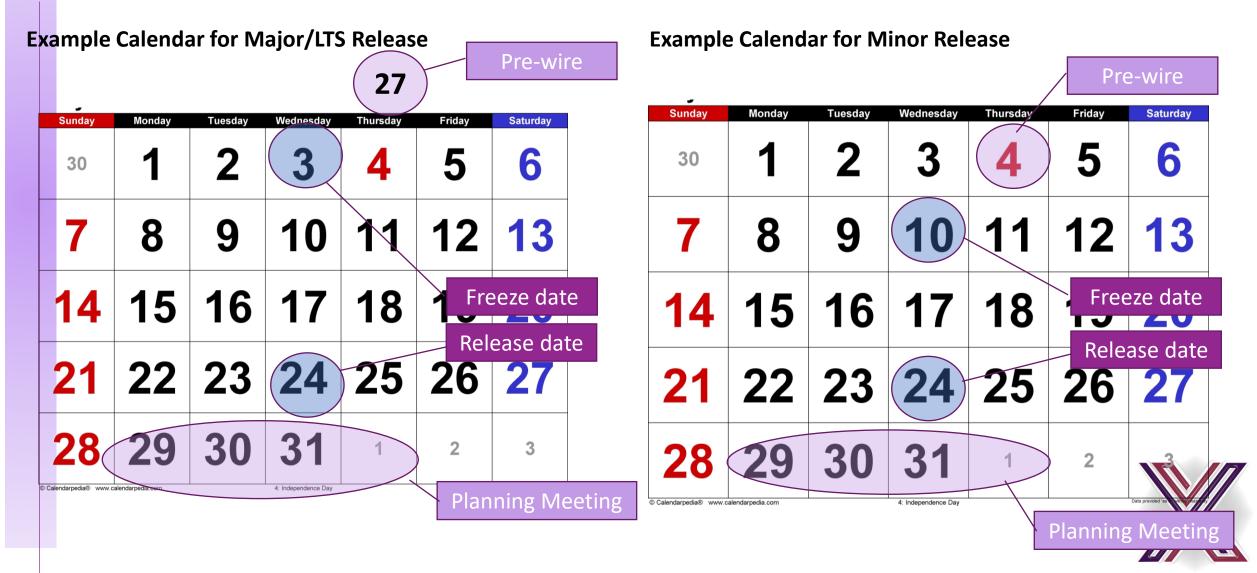

Release Timing Details

- EdgeX has a semi-formal release/planning schedule as follows:
- Generally attempt to select release date about 2 months in advance of the release
 - Typically April and October for spring/fall releases
 - Release date preferred to be a Wednesday
 - Adjust per circumstances and TSC review
- Release schedule for minor release
 - Freeze date 2 weeks in advance of release date
 - Prewire, Thursday prior to freeze date
- Release schedule for major or LTS release
 - Freeze date 3 weeks in advance of release date
 - Prewire, Thursday prior to freeze date
- Planning meeting generally the week following the release
 - Virtual meeting: Monday Wednesday, with Thursday as possible extra day
 - In person: Tuesday-Thursday

- If travel is necessary planning meeting may need to be a week out
- Include manual testing in the release schedule

Formalized Release Timing/Planning

Scoping and Planning

Scoping Exercise

• Categories used in our Pre-Wire

- In scope
 - It is "In scope" must be done; no debate; near unanimous consent
 - Should not take (much) time in the planning meeting to discuss
- Under consideration
 - It is definitely under consideration for the planning meeting and release
 - It is not in scope yet, but it worthy of some time to discuss; with a strong tendency to put it in scope
 - Has a majority of support to at least consider it; must be put in or out of scope at the end of the meeting

• Not sure/On the fence

- There are some that believe it should be under consideration or in scope but others are unsure or even against it.
- To be reviewed and debated during the planning meeting as time permits; placed out of scope by default if not covered in the planning meeting
- Out of scope (Not discussing in this meeting)
 - A majority believe this work will not be covered in the next release
 - A potentially valid need, but just not going to be accomplished for the next release (example: non-backward compatible change)
 - These items will not be discussed during the planning meeting but will be added to the backlog/roadmap
- Never in scope
 - A majority believe this work will not be (ever) accomplished in EdgeX
 - Remove from the backlog or future scope (with rationale)
 - These items will not be discussed in planning meetings going forward

Architect's Topic / Prewire List

In Scope

- URIs for Files
- Common Configuration Completion
- EdgeX Data Modelling and Relationships
- Zero Trust / Secure Distributed EdgeX (at least ADR)
- Bring Your Own Vault (at least ADR)
- EdgeX V3 Docs

Under consideration

- Core Data Retention
- NanoMQ

• On the Fence

Notification Services Improvements

Items already set as "out of scope" or "never in scope"

Out of Scope - potentially valid, kept in backlog

- EdgeX Lite build in/out features
- Real Hardware Testing
- Additional Metrics
- App Service Tensor Flow Transformations

Never in Scope - will not be accomplished, removed from discussion

• Support Multiple Triggers in App Services (contradictory to microservices architecture)

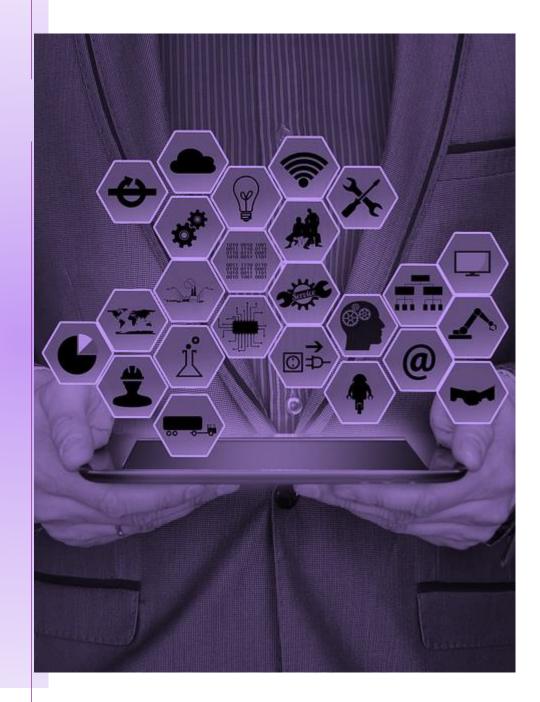

Planning Considerations

- Is there a champion / developer to drive the solution & get the work done
 - Who
 - Timeline
 - Dependencies
- What is high priority and what is a stretch goal?
 - T-shirt size it
 - Small one release; one WG; one service; approximately one man to complete
 - Med one release; many services;
 - Large one release; all services; could take someone all release to finish
 - X-Large multi-release and probably more than one service

In Scope

URIs for Files

• Better configuration capability

- Potential to use a URI to specify an external configuration location (allowing for file, HTTP, HTTPS or other protocol access support)
- URI mechanism may be used to point to device profiles, configuration files, UoM and other "configuration" information - i.e., this is not just about the "common" configuration files
- This would even allow multiple EdgeX instances to use the same configuration or profile (multiple EdgeX instances using the same URI to use a shared profile for example)
- Support better deployment scalability
- Previous Progress
 - UCR Approved <u>https://docs.edgexfoundry.org/3.0/design/ucr/URIs-for-Files/</u>
 - ADR Approved <u>https://docs.edgexfoundry.org/3.0/design/adr/0027-URIs%20for%20Files/</u>

Common Configuration – Things to Complete from 3.0?

- Biggest item completed in 3.0, but any more aspects to complete/improve?
 - UCR: https://docs.edgexfoundry.org/3.0/design/ucr/Common%20Configuration/
 - ADR: https://docs.edgexfoundry.org/3.0/design/adr/0026-Common%20Configuration/
- One known bug to fix https://github.com/edgexfoundry/go-mod-bootstrap/issues/534
- Internal code refactoring
- Implement Common Config for C Devices

EdgeX Data Modelling and Relationships

- 1. Parent/Child Devices Last year scope: Small/Med
 - Add optional relationship metadata property that indicates a parent device to build hierarchical relationships between devices (often required at the northbound side for groupings management and presentation)
 - ADR not required, not cross cutting. Eaton to raise a usual issue/PR and document the need here

2. Extending Device Data – Last year scope: Large

- Means to extend a southbound device's profile with new resources (e.g., min, max, alarms, trends) that are added and managed by a higher-level service (e.g., analytics, utility or exporter)
 - ADR required since this is Core Metadata and Core Command related, potentially device SDKs Eaton to action
- 2.a Adding virtual device resource. <u>https://github.com/edgexfoundry/device-sdk-go/issues/1272</u>
- 3. Provision Watch via Device Metadata Last year scope: Small/Med
 - Allow device provision watchers to utilize both device metadata (e.g., serial number, MAC address, etc) and the existing protocol properties as needed
 - General enhancement on provisioning; ADR not required. Eaton to raise an issue/PR as normal
- UCRs for all of the above approved in the Lesvki cycle

Zero Trust / Secure Distributed EdgeX (OpenZiti Integration)

- How to authenticate EdgeX microservices running across different nodes
- Nice article: <u>Bryon's LinkedIn Post</u>
- Possible help from Clint Dovholuk of NetFoundry?
 - See Clint's demo: <u>https://www.youtube.com/watch?v=ARuGmzNuz-w</u>
 - In this prototype, OpenZiti client libraries have been directly linked in to EdgeX's basic microservices and have replaced the standard TCP/IP listeners and dialers that most REST-based microservice architectures rely on. The demo also includes a "Zitified" a third-party component, the eKuiper rules engine, which was done with only a few lines of code. The Zitified services have no open HTTP ports that can be attacked, and all inbound REST calls are authenticated by an OpenZiti-linked identity. Only the OpenZiti control plane and edge router components bear the risk of exposed ports.
- ADR: In Scope
- Implementation: Under Consideration

Bring Your Own Vault (BYOV)

- Supporting adopters that wish to run EdgeX in an environment that has (or will have) an existing Vault instance not setup by EdgeX
- UCR Approved: https://docs.edgexfoundry.org/3.0/design/ucr/Bring-Your-Own-Vault/
- ADR next? In Scope
- Implementation in Napa? Under Consideration

EdgeX V3 Docs

- Especially important for a stablization / LTS release
- Already better: new commit policy updates the documentation with every code change
- Known Areas for Improvement:
 - Replace all v2 refs in the v3 docs
 - C Device SDK
 - C Device Services
 - Others?

Under Consideration

Core Data Retention

- Desire to have Core Data serve more as a cache, i.e., keeping only latest *n* readings
- UCR Approved: https://docs.edgexfoundry.org/3.0/design/ucr/Core-Data-Retention/
- During Minnesota planning, we decided ADR not needed
- Implementation is with Core WG

NanoMQ https://nanomq.io/

- EMQ (the company behind EdgeX rules engine eKuiper) have built a lightweight message broker called NanoMQ
 - Claimed to be extremely lightweight and very fast (compared to Mosquitto and HiveMQ)
 - Implements Sparkplug, includes an embedded rules engine, brokerless options
 - EMQ pushing to start another LF Edge open source project
 - Could/should EdgeX consider NanoMQ as an internal messaging option (alongside Redis Pub/Sub and Mosquitto)?
 - LF Edge community and support/maintenance benefits
 - Other thoughts?
- EMQ presented at architects meeting in May. Recording here: <u>https://wiki.edgexfoundry.org/display/FA/Architects%27+Meeting</u>
- May depend on resourcing
- Need to consider security

On The Fence

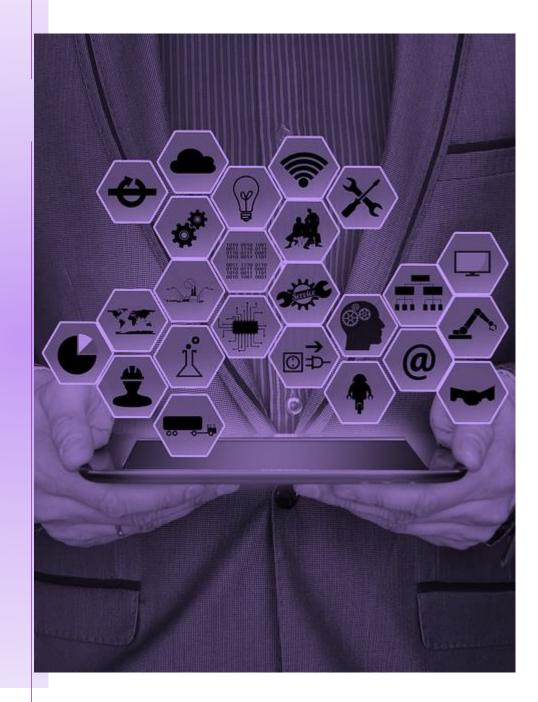

Notification Service Improvements

- Suggested Improvements
 - Currently only email or HTTP; Better to provide support for sending notifications via SMS, web sockets or message protocol (like MQTT or Redis Pub/Sub)
 - Request to make using/sending notifications easier. Today, a developer must write code directly into a service to be able to send a notification. Is there a way to do some notifications by configuration? At the very least, better examples need to be provided on how to use the notification service
 - Also needed is a way for the rules engine to trigger notifications.
- T-shirt size: Last year: Small/Medium, self-contained
- Scope: Stretch, help wanted, etc

Ideas:

- Perhaps build on the back of an "alarm" service Jim's requirements work
- Pipeline function to send notification via Support Notifications (see App Services WG later)
- eKuiper/rules integration

Napa Scope

Caveats / Notes

- Items in the pages following are options at this point
- May be research or design tasks for this release
 - May be partial implementation
- No level of effort has been determined
- No priority has been assigned
- NOTE: scope does not include tasks and work items that come from the main architectural discussions earlier
 - These need to be added and scoped as well

General

- Upgrade Go Version. Minnesota currently at 1.20. Next version (1.21) ?
 - Likely August. Under Consideration. Important for TLS to have latest
- Replace any poorly supported 3rd party libs these on previous lists:
 - <u>bitbucket.org/bertimus9/systemstat</u>
 - github.com/armon/circbuf
 - github.com/go-logfmt/logfmt
 - github.com/mitchellh/consulstructure
 - github.com/pascaldekloe/goe Consul
 - github.com/ryanuber/columnize Consul
 - github.com/sean-/seed Consul
 - Cloud comments that these may not be poorly supported, rather they are simple and haven't needed maintenance

- More metrics across the microservices
 - Should be user/request driven
 - lastConnected / lastUpdated already removed
- Helm Charts as release artifacts
 - Under Consideration
 - Move example Helm Chart to its own edgex-helm repo
 - Maintain and release as we do with edgex-compose
- Any project management enhancements
 - See later
- Check LTS Feature List next slide
 - Need to check/update the LTS page and what is in LTS 3.1

LTS Services and Restrictions

- Review Confluence Page: https://wiki.edgexfoundry.org/pages/viewpage.action?pageId=70948690
- Any LTS items we should add, remove, amend?

Core Working Group

- Core
 - URIs for Files main architecture item
 - Core Data Retention main architecture item
 - Common config writable mechanism code refactoring Under Consideration
 - Chinese characters support for all the DTO names <u>#4053</u> In Scope
 - Move all the common API into go-mod-bootstrap <u>#478</u> In Scope
 - Replacement for Gorilla/MUX package <u>#4247</u> Under Consideration
- Test QA
 - Add tests to use Chinese and space character in DTO names #836 In Scope
 - Fuzzing tests for different services In Scope
 - Automation tests for Core Data Retention and Persistent (see above)
 - More automated testing Under Consideration
 - Test CORS support (header validity, secure, non-secure) <u>#850</u>
 - Test multiple device services of same type <u>#851</u> (App Services already done)
- GUI Waiting on Thundersoft feedback and resources
 - RulesEngine Rules Bug <u>#550</u>
 - Add Provision Watcher Tab to Metadata section

- Icebox mostly don't warrant architect discussion
 - Websocket support for support-notifications <u>#2304</u>
 - Error occurs sometimes "couldn't create database client" when repeating to restart services <u>#4005</u>
 - [Tech-Debt] Refactor the knowSecrets in composebuilder/makefile to use script or function <u>#284</u>
 - Support for EdgeX holding services via a fork in the edgexfoundry-holding organization <u>#233</u>
 - Add support for services to notify systemd socket when ready <u>#1301</u>
 - Support automatic migration of Devices between Device Services <u>#1451</u>
 - Module exploration remove or replace github.com/kr/logfmt <u>#2616</u>
 - Various noted fuzzing errors

Security (Owned by Core WG)

- Main Items
 - Zero Trust / Secure Distributed EdgeX (OpenZiti integration). ADR: In Scope, Implementation: Under Consideration
 - Nice article: <u>Bryon Nevis on LinkedIn: #security #iot #edgexfoundry #zerotrust #openziti</u>
 - Bring Your Own Vault. ADR: In Scope, Implementation: Under Consideration
 - eKuper API security is not enabled when EdgeX is running in secure mode <u>#4538</u> see OpenZiti work
 - Enable eKuiper to make authenticated EdgeX API calls <u>#4539</u> see OpenZiti work
 - Fuzz testing for REST/MQTT interfaces #714
- Tech Debt
 - edgex-vault logs contain errors about revoking consul token leases <u>#3544</u>
 - Refactor the anonymous function inside secretstore-setup for init Vault <u>#3182</u> (Covered by BYOV)
 - Integrate spiffe / delayed start into snap build <u>#4527</u>
- OSSF Silver Items (Bryon suggests lower priority than Fuzz testing all nice to have)
 - Enable forced credential rotation in secrets-config utility [ossf silver] #4227
 - Formal policy on new functionality testing [ossf silver] <u>#899</u>
 - Others

Device Services

- New/Updating Device Services
 - UART DS on V3 (currently code for V2 but not yet released)
 HCL willing to do the upgrade
 - HCL CAN Device Service (new)
 - HCL BLE Device Service (update holding version)
- Some low priority fixes/enhancements were pushed to 3.1... what were they? – largely minor updates on specific services – e.g. Modbus
- Remaining areas where C Device SDK is missing features:
 - NATS Support
 - Secure operation with delayed service start
- More Device Service Documentation

- Icebox all seem to need user pull and/or resources
 - Handle both JSON request bodies as well as CBOR request bodies #<u>488</u>
 - DS operatingState doesn't go down post DS stop (C) #<u>356</u>
 - Implement size constraints for devices and profiles #<u>18</u>
 - Support regular expressions in assertions #839
 - DS Filtering implementation (ADR already in place)
 - Downsampling Throttling device data send based on ability to consume/use

Application Services

- In Scope
 - Record and Reply Implementation
 - ParameterObiects & HTTPRequestHeaders parameter for ASC HTTP Export
- Under Consideration
 - Add pipeline function to send notification via Support Notifications
 - Add ability to set MQTT Will options for external MQTT server connections
 - Add support for regular expressions in filters

- Out of scope
 - [LLRP] Add LLRP Inventory specific service metrics
 - Additional App Service metrics
- Any more from Icebox?

DevOps

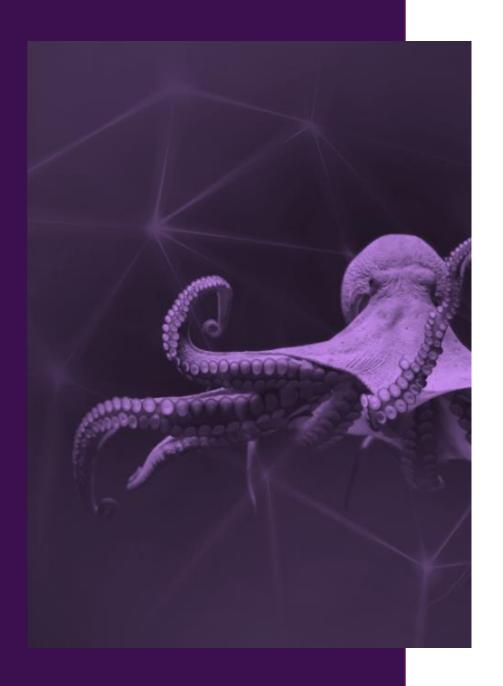

Main Items

- Named/Vanity (i.e minor 3.x) tag automation on release
- Generate GitHub releases on tag creation via GitHub actions
- POC gotesttools/gotestfmt for better unit test output in Jenkins pipelines
- Address missing commits in changelog due to issue with ! in the commit type
- Fully Automate DockerHub description/overview updates
- Go version upgrades
- Misc release automation cleanup

From the Icebox

• None 🙂

Day 2

Conference Agenda – Day 2

- 9:00am Napa Architecture Discussions cont...
- 10:00am EdgeX Awards 2023 Naming the winners (Kendall)
- 10:15am Napa Scoping by Working Group
- 12:00pm Day 2 adjourn

EdgeX Awards

- Congratulations to all nominees
 - Contribution Award
 - Lenny Goodell (Intel)
 - Cherry Wang (IOTech)
 - Bruce Huang (IOTech)
 - Melvin Sun (Intel)
 - Laura Alvarez (IOTech)
 - Cloud Tsai (IOTech)
 - Bill Mahoney (Intel)
 - TAF Team (IOTech Taiwan)
- Kendall to announce the winners...

- Innovation Award
 - Lenny Goodell and Elizabeth Lee (both Intel)
 - Vijay Annamalaisamy (HCL)
 - Ernesto Ojeda (Intel)
 - Bryon Nevis (Intel) **ineligible this year

Day 3

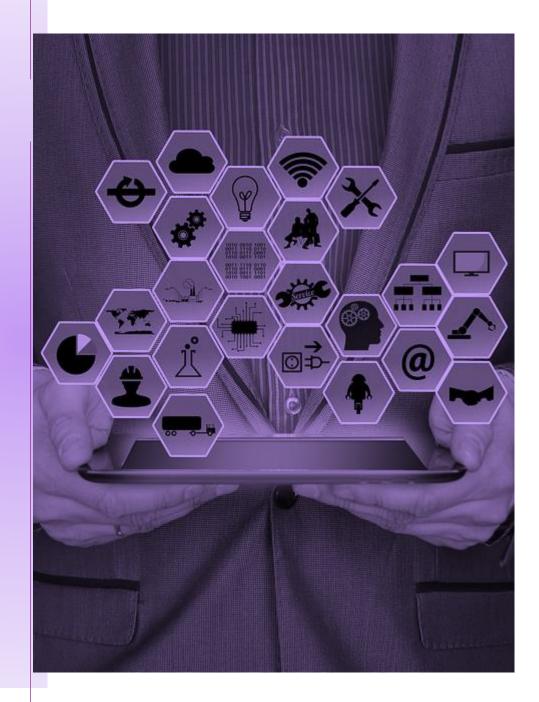

Conference Agenda – Day 3

- 7:00am Napa Scoping by Working Group cont...
- 7:15am Business and Marketing Topics
- 8:00am Project Process Improvements
- 9:00am Lessons Learnt, Evaluation, etc
- 10:00am Day 3 adjourn

Business Topics

Business Topic Agenda

- Web Site
 - Current stats and status (See Slide)
- Developer Evangelism (Jim/James)
 - Social Media (See Slide)
 - Encourage public EdgeX usage
 - More write ups? e.g., Eaton's use case document
 - More adopter series?
 - More Tech Talks? How-To videos?
 - More Hackathons? Intel's EdgeX Coding Competition is ongoing
 - Return to in-person events in 2023? LF OS Summit in Bilbao, Spain (September 2023)? Others?
- Future of the Outreach WG? This is not a TSC Voting Position
 - Wider topic how best to accomplish Outreach work?

EdgeX Website Update

- IOTech responsible for
 - <u>Release updates</u>
 - <u>Tech Talks updates</u>
 - Reporting of site stats
 - In Google data studio
- Technical SEO Audit undertaken throughout Q1
 - Original recommendations shown (a lot of TODOs)

| INDEX | ITEM CHECKED | ACTION | RESPONSIBILITY | STATUS |
|-------|-------------------------------------|---|----------------|--------|
| 2 | Code Validation | In <u>HTML validation check</u> on the homepage shows 90 Errors and 14 warnings. Ve should review the errors and fix them if possible. | | TO DO |
| 3 | Accessibility | A check on the homepage scores 54/100 on <u>https://www.webaccessibility.com/</u> We should review and implement any improvements if possible. | | TO DO |
| 4 | Clean Index | Some pages are empty and need to be removed. Some pages are low-quality pages and need more content to be added. | Members | TO DO |
| 5 | Title Tags & Meta Descriptions | The Titles and Meta Descriptions are not <u>optimized</u> . Some of them are missing and others need review. | | DONE |
| 7 | Image Alt Text | All images on the website are missing the Alt Text. This needs to be added to include keywords and relevant descriptions. | IOTech | TO DO |
| 8 | Site Structure | Some floating pages are not <u>organized</u> and the best practice is to group them into relevant categories. | IOTech | DONE |
| 9 | Heading Tags | 48% of pages are missing an H1, and others need to be optimized. | IOTech | DONE |
| 13 | Noindex Tags | oindex Tags Some pages have a <u>noindex</u> tag. These pages should be reviewed to check if the tag should be removed. | | DONE |
| 14 | XML Sitemap | XML Sitemap The XML sitemap is present on the website. However, the wrong sitemap is submitted to GSC and needs to be updated. IOTech | | DONE |
| 18 | Mobile & Desktop Core Web Vitals | Waiting for results | | TO DO |
| 19 | Mobile & Desktop Page Speed | The mobile website has a ranking of 47/100 and the desktop website 68/100. We should try to implement the recommendations_set out by Google if possible. | IOTech | TO DO |

SEO status at Lesvki Release (late 2022):

EdgeX Website Update

SUMMARY

- Everything actioned
 - Code Validation
 - Accessibility
 - Clean Index
 - Image Alt Text
 - Mobile & Desktop Vitals
 - Mobile & Desktop Speed
- Except members section which needs updated text

SEO status at Minnesota Release:

| INDEX | ITEM CHECKED | ACTION | RESPONSIBILITY | STATUS |
|-------|-------------------------------------|--|----------------|------------|
| 2 | Code Validation | An <u>HTML validation check</u> on the homepage shows 90 Errors and 14 warnings. We should review the errors and fix them if possible. | Capitan | DONE |
| 3 | Accessibility | A check on the homepage scores 54/100 on <u>https://www.webaccessibility.com/</u> We should review and implement any improvements if possible. | Capitan | NOT NEEDED |
| 4 | Clean Index | Some pages are empty and need to be removed. Some pages are low-quality pages and need more content to be added. | Members | TO DO |
| 5 | Title Tags & Meta Descriptions | The Titles and Meta Descriptions are not optimized. Some of them are missing and others need review. | IOTech | DONE |
| 7 | Image Alt Text | All images on the website are missing the Alt Text. This needs to be added to include keywords and relevant descriptions. | IOTech | DONE |

EdgeX Website Update – Keyword Research

https://docs.google.com/spreadsheets/d/1lYqcTwwEXzgVa9ftO8-dcQE0DD_jvVTPo2UkDdsxqIU/edit#gid=0

Brief Summary:

- 'first ranking' column is where we started, before making the changes
- 'current ranking' column shows this month's results
- 'changes since last month's column shows the difference from last month, as I didn't want a massive spreadsheet with all month's results
- This is creating some changes in traffic and users, as it is starting to show the page in different keywords as it did before.

| Theme | Keywords | Searches / Month | EdgeX Foundry | | |
|--------------------------|-------------------------------|------------------|---------------|-----------------|--------------------------|
| meme | | Searches / Month | First Ranking | Current Ranking | Changes since last month |

EdgeX Website Update – Traffic Analysis

- SEO changes and content additions seems to be leading to positive results:
- Comparing data from May and February (before and after changes on the keywords)
- Overall traffic has improved, but specifically organic traffic is getting better results than it was before, and it is the first source of traffic, followed by direct

| Session default channel group 👻 🕂 | ↓ Users | Sessions | Engaged sessions |
|-----------------------------------|---|--------------------------------------|---------------------------------------|
| | 2,207 vs. 2,099 † 5.15% | 3,848 vs. 3,509 ↑ 9.66% | 2,031 vs. 1,761 † 15.33% |

Social Media

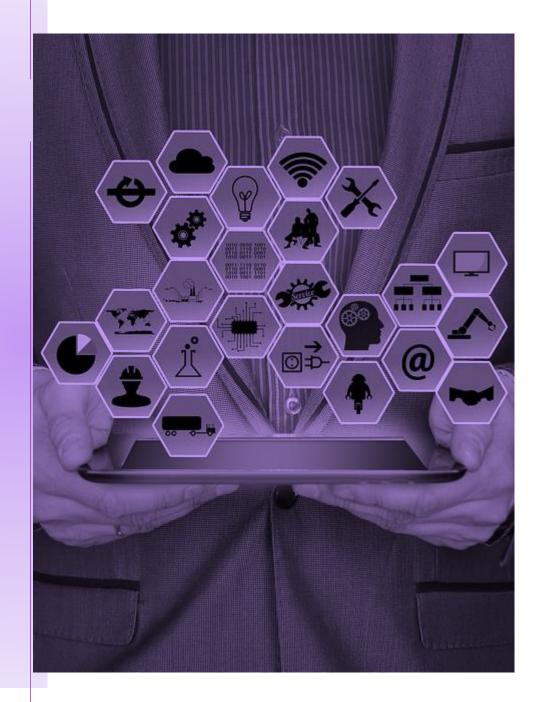

- EdgeX now running its own Social Media
 - Posting 2-3 times a week (thanks to Gavin, Laura and IOTech team for help)
 - If you have a post you'd like to make, let Jim/James/Gavin know

• Stats and Study (Thanks Jim)

o Linked In

- Good Engagement rate 2-3%
- Good Click through rate 2-5%
- Good Impressions #: 1K good, 5K great
- o **Twitter**
 - 0.5% good; 1% is great
 - Impressions in 100's
 - Our engagement rate around 3% month over month
- Takeaways
 - LinkedIn better than Twitter for volume, impressions, quality of traffic
 - Dos
 - Release announcements
 - Highlight feature or value
 - Real use case/demonstration/reference
 - Offer or announce something of value/something new
 - Quick poll can provide good impression #s (not as high click through)
 - Don'ts
 - (Repetitive) Event announcements
 - Repeat content
 - Non-EdgeX product
 - Adopter replays (of the week)
 - Highlight the obvious (docs location, video location)
 - Tell me something I already know or repeat something over and over, tell me something outside of the project I don't care about

Process Improvements

Process Improvements - Agenda

- EdgeX Meetings Days and Times check
- UCR and ADR process
- Issue and PR process
- Community Chat: GitHub Discussions
- Third-Party Libraries
- EdgeX Project Boards

EdgeX Meeting Times

- Mondays
 - Device Services @ 8am PT. Plan to alternate weeks between this and 4pm PT
 - Outreach/Marketing @ 9am PT (3rd Monday each month)
 - UI Project Group @ 7pm PT
- Tuesdays
 - DevOps @ 9am PT (2nd Tuesday each month)
 - Application Services WG @ 2:30pm (alternate weeks)
 - Core @ 4pm PT
- Wednesdays
 - TSC or Architect's Meetings @ 8am PDT (alternate weeks)
 - Security @ 9am PDT
- Thursdays
 - No meetings
- Friday
 - China Project Meeting 12:00am (1st Friday each month)

- Any Changes
 - More/less frequent?

ADR / UCR Process

- During Levski cycle we added Use Case Record (UCRs) to the process
 - https://docs.edgexfoundry.org/3.0/design/Process/
 - Aim was to better agree needs and requirements before diving into architectural details (ADR)
 - Believe this is working well for us? Any suggested tweaks?

Issue and PR Process

- Any issues with Issues to report?
- Are we under-defining the Issue/Case creation template?

Community Chat: GitHub Discussions

- In last cycle migrated away from Slack to GitHub Discussions as the many community communication mechanism
- https://github.com/orgs/edgexfoundry/discussions
- Daily questions posted with much discussion thanks to all contributors!!
- Suggestions for refining the process / management of discussions:
 - Mark discussions as closed when resolved
 - Mark specific comments as "answers" Stack Overflow style
 - Keep conversations specific to original question. Open new discussions when needed
 - Promote "Show and Tell" section for EdgeX adopters / use cases
- How to ensure questions raised result in awareness of requirements/needs?
- Other thoughts/comments?

3rd party library support

- We have a process in place to review and vet 3rd party libraries being used by the project
 - We perform a "paper study" to explore the use, ongoing development status, upkeep, and contributors to a library
- In many cases, 3rd party libraries have less than ideal maintenance records, use, etc.
 - But often, there are few or no alternatives to using a library we might otherwise reject
- What to do about this going forward?
 - Fork and maintain libraries (at least those with potential support issues) in EdgeX
 - Only do this when the library team is not responding to an issue
 - Try to provide assistance to these library projects
 - This is our main recourse for issues
 - Do nothing hope for the best; react to issues as they arise
 - We have and maintain our vendor copy
 - Default as long as there are no issues
- Decision: apply more scrutiny to non-version libs but not a hardline to refuse them

EdgeX Project Boards - <u>https://github.com/orgs/edgexfoundry/projects</u>

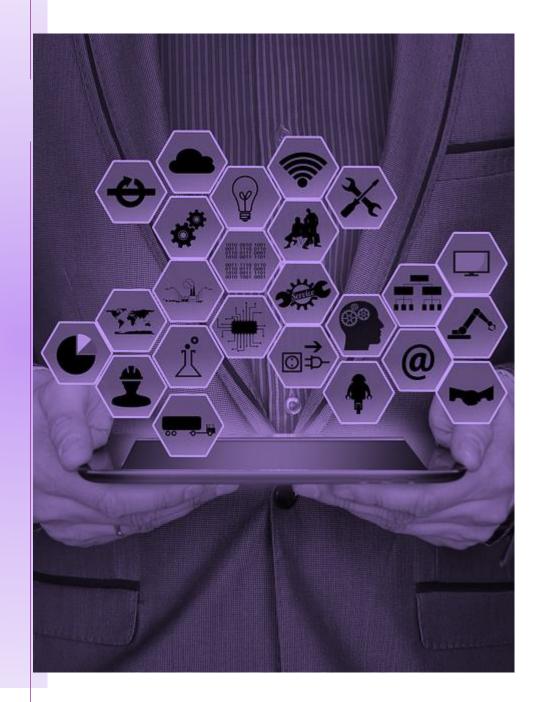

- Time for all to transition to Napa boards By End of June?
 - Remove the Dones
 - Clean out In progress, QA Review, etc.
 - Move appropriate Icebox items back to the Backlog (leave issues not going to be addressed in the Icebox)
- Start a new Napa Documentation update (or rename Minnesota)
- Feedback on the different project boards that are being used?
 - Most working groups use "new" GitHub boards
 - Time to migrate all remaining boards from "classic" to "new"
 - Some old boards to delete/close e.g. Certification WG, Kamakura Docs, etc

Manual Release Testing

- <u>https://wiki.edgexfoundry.org/display/FA/Manual+Testing</u>
- Generally adding these tests to TAF / Automation
- Plan to add a checklist for future manual release testing

Lessons Learnt, Continuous Evaluation, etc

Lessons Learned in Levski (What we said last time)

• Positives

- Release Checklist works well
- UCR helps focus our aims before diving into tech details
- We hit all our main 2.3 implementation targets
- Docs released on schedule (done as went along)
- Security process worked well, e.g., handling CVEs
- Automated testing continues to rise
- Seamless transitioning of people

- Areas of improvement
 - Better Commit messages for change logs
 - We should make architectural decisions earlier in the cycle
 - 1 month frequency too low
 - Can we do these more ad-hoc and on-demand
 - More expectation of moving through the UCR/ADR/Impl process in a timely manner
 - Alternate TSC and Architect's Meetings on the Wednesday

GitHub Discussions – To Fill In

• What are we getting requests for? How can we improve for users?

Lessons Learned in Minnesota – TO FILL IN

• Positives

• Areas of improvement

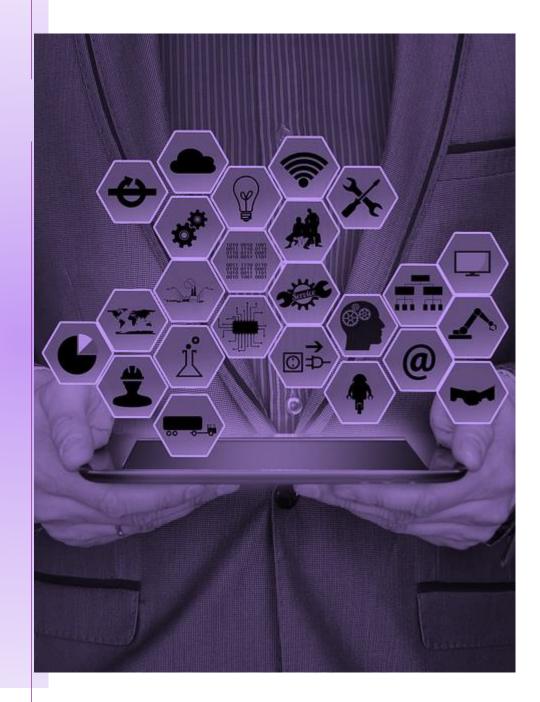

Planning Meeting Lessons Learned

Release Planning Meeting

- Any lessons learned?
- Any thing that could be done better?
- Start doing, continue doing, stop doing?
- What worked well and what did not?

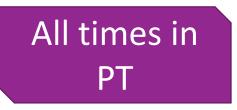

Day 4

Conference Agenda – Day 4

- 9:00am Topics TBC
- 12:00pm Day 4 adjourn

Thank You

$E D G E \mathbb{X} F O U N D R Y^{\mathsf{T}}$ A Linux Foundation project under $\Box \mathsf{LF} \mathsf{EDGE}$
