What is Confluence? (step 1 of 9)

Confluence is a collaboration tool where you can create and share content with your team.
You might use Confluence to write and discuss meeting notes, project plans, requirements, how-to guides, or anything you like.

Click the **Create** button on the header to see some of the types of pages you can create.

A Confluence page can contain text, images, diagrams, activity streams, videos, and more.
Confluence puts your content online in a central place where your team can search, edit and discuss it at any time.

So let's try it! Click here to learn how to edit a page
