Potential Scope

Potential scope for enhancements / changes in Ireland/v2.0 cycle

- Consume v2 API
  - At Hanoi, the v2 REST interfaces for core-data and core-metadata should be available - use them.
  - Unconditionally or should this be a config option?
- Old items on-hold because they are breaking changes
  - support-logging removal
  - Naming scheme changes for config.Clients
- Event filtering: implementation
  - Requires 1) design phase completed 2) volunteer effort for implementation
- Messagebus for Device Service App Service: implementation
- Obtain security credentials from secret store: provision in the SDKs, implement at least in device-mqtt
  - Stretch: other DSs
- Remove binary representation (base64) for floating point values
- Remove OperationalState for device services (as opposed to for individual devices)
- Rename OperationalState values (currently ENABLED/DISABLED, suggest UP/DOWN)
- ~~Ensure that the various agreed device profile changes are in for V2:~~ Currently in place in go-mod-core-contracts
  - ~~Units simplification~~
  - ~~CoreCommands simplification~~
  - ~~Removal of deprecated PropertyValue fields: precision, size~~
