Minnesota Release

Delivery: ~ May 2023

Namer: Brett Preston (Linux Foundation)

Per the Minnesota Planning Meeting (11/2022), Minnesota will be the EdgeX 3.0 release. Napa would then likely be a stabilization/LTS release.

Major additions planned for this release include:

- Global configuration (high priority)
- Using URIs for configuration (high priority)
- Simplify configuration formats
- Device relationships – parent/child and extending device data
- Microservice authentication with Vault JWT
- Notification Service improvements (stretch goal)
- Replace Kong, Consul, Vault with lighter weight options (stretch goal)

The slide deck below provides detailed scope and action items for the release (from the Nov 2022 planning meeting)
