

Manual Testing

Test	Owner/Actions
Test any configuration not already handled by new TAF tests	Test CORS support – check headers there if enabled (both ways secure/non secure. Ticket for adding to TAF: https://github.com/edgexfoundry/edgex-taf/issues/850
Test reboot of the system. Make sure EdgeX can come back up	Containerized Snap reboot test
Test device services (with real hardware where possible)	
Working with service authors to identify minimal tests	Start requiring contributions of DS to include this Add MD page to each DS
Test running with multiple services of same type (device service and app services)	App service – done in TAF Ticket for adding the device service test to TAF: https://github.com/edgexfoundry/edgex-taf/issues/851

The following are now automated by TAF:

- Persistence on/off (persistence = false pass through) is covered
- Test different combinations/permutations of app functions in app services - MQTT and HTTP export functions are covered
- Test running of multiple app services
